AVReporter

v4.0 IOS & WP Mobile Client

 <http://www.twitter.com/avreporter>

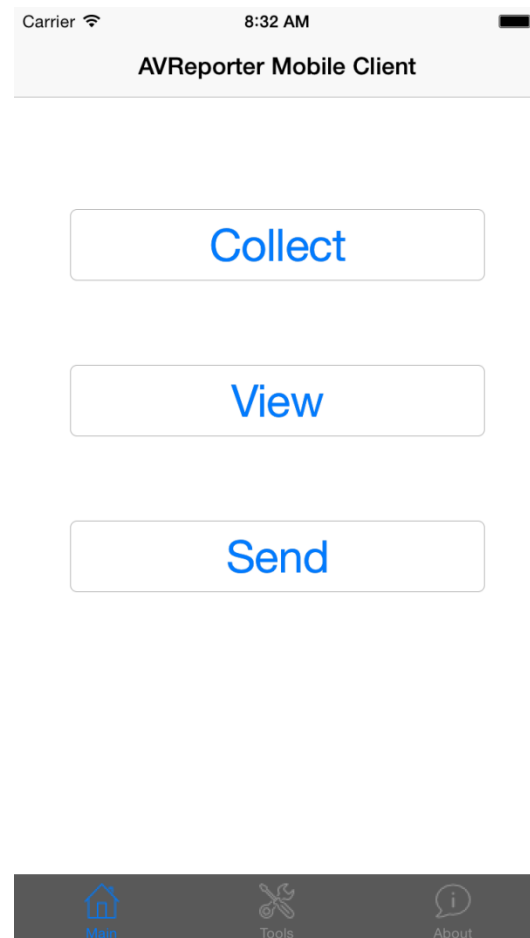

Starting up AVReporter Mobile Client

AVReporter Mobile Client can be installed on Windows Phone (software requirement Windows Phone 8.1 or newer version) or iPhone (software requirement IOS8 or newer version).

By this way measurement data can be entered (identifying meters manually or by QR code) and sent by email (attachment in CSV file format) into the AVReporter server application.

Windows Phone Mobile Client

iPhone Mobile Client

Settings

The following options are located in the Settings menu (by IOS it is Tools):

Enable manual device ID entry

Enable manual date/time entry

Remember measure unit of each device

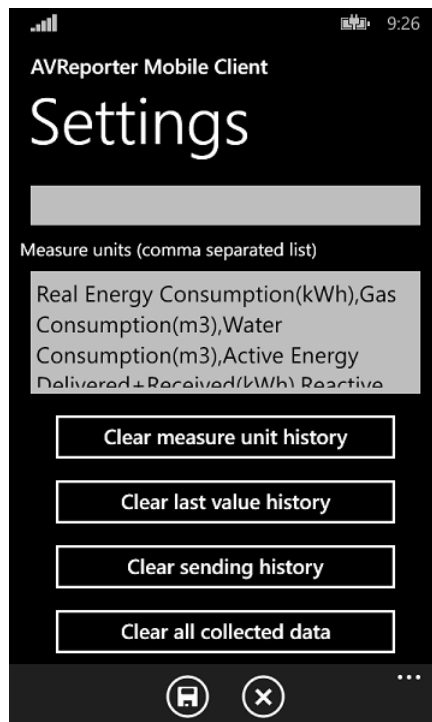

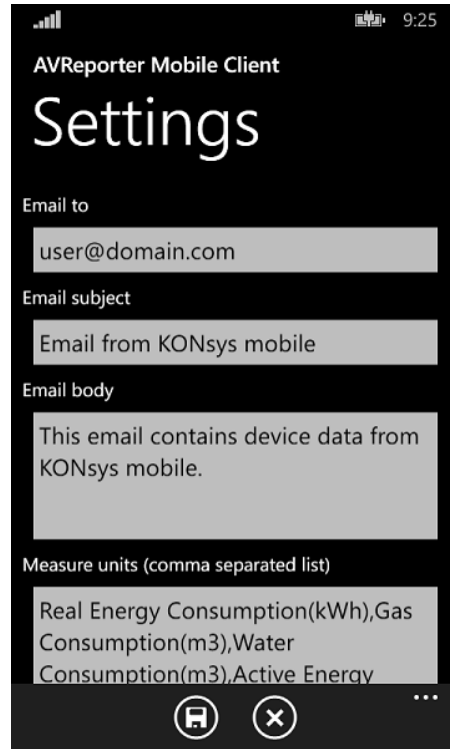

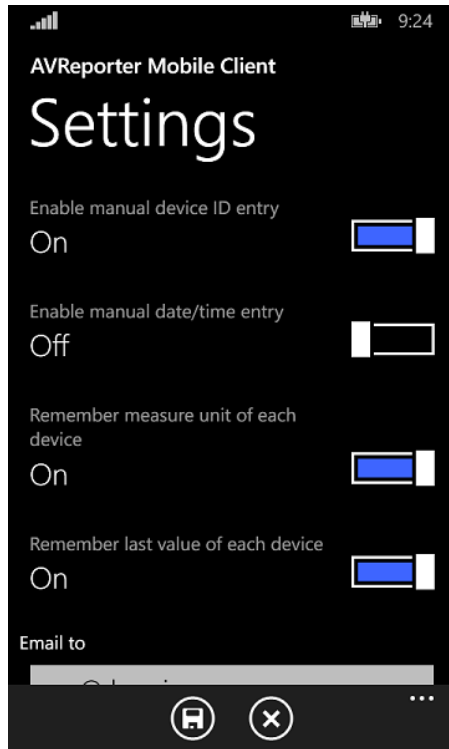

Remember last value of each device: if the newly entered value is less than the last one, a warning message will appear

Email to: to whom the measurement data should be addressed (to whom the measurement data should be addressed)

Email subject

Email body

Measure units

Collect

The Collect menu allows us to record the consumption or the value of each meter. Firstly, we have to identify the meter: either typing manually or using QR codes. Next step is to record the measurement value and choose the measurement unit. If the function of **Remember measurement unit of each device** is on, based on the device ID the measurement unit will appear automatically.
